**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 8, 10-14, 18 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoshimura.

Yoshimura discloses an optical amplification system comprising: a span of dispersion compensating fiber (6) configured to carry optical signals; a temperature control system (10) positioned proximate to the span of dispersion compensating fiber and configured to control the environment surrounding the fiber to a table temperature.

Reduction of polarization mode dispersion fluctuation is reduced because the temperature of the fiber does not fluctuate.

The structure recited above reads on claim 1.

Claims 2 and 3 read on element (10) because figure 3 shows it in direct contact with the dispersion fiber.

Claim 4 is taught by figure 13.

Claim 8 is taught by column 1, lines 11 and 12.

Claim 10 is taught by elements (8) and (9).

Claims 11-14, 18 and 20 are taught by the structure applied to claims 1-4, 8 and 10.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshimura.

The amplification system of Yoshimura was intended at the time of the present application for amplifying optical communication signals. A bit rate of 40 Gb/s was a notoriously well known rate for this type of signal.

Claims 5, 6, 9, 15, 16 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication should be directed to Mark Hellner at telephone number 703 306 4155.
